

## TEN-MONTH STUDY - NEW BATTERY

### HF Charger with Deka Batteries

New batteries built in June of 2015 were installed and readings were taken in July 2015.

New readings were taken nine months later in March 2016. Specific gravities dropped.

Then, the chargers were armed with PowerJockeys.

A month later, the specific gravities rebounded.

One returned to its original condition, and the other surpassed it.
